## ABSTRACT:

PROBLEM TO BE SOLVED: To provide a digital contents unauthorized copy preventing  
system capable of preventing copy, and inexpensively transferring digital contents  
data.

SOLUTION: This distributing device 3 capable of distributing contents to client  
terminal equipment 5 is provided with an incomplete contents preparing means 31 for  
dividing an original contents file 38 into perforated contents data and  
complementary data under a predetermined condition, and for acquiring dealing  
instruction meta information MI of the perforated data obtained from the  
predetermined condition, and for storing the complementary data in a complementary  
data file 34. Also, this device is provided with end batch transferring means 32  
and 33 for transferring the perforated contents data and the data dealing  
instruction meta information in a batch and a transferring means 37 for extracting  
and transferring the complementary data from the complementary data file 34 in  
response to a use request from the client terminal equipment 5.
